

Jotron reaffirms its ATC dominance in Greenland

Jotron, a global leader in communication technology for land, sea, and air applications, has delivered complete turnkey VHF radio systems, VCS and Ricochet Recorders to three airports in Greenland. The contract was secured through Jotron's long-standing partner, COMSA Corporación of Spain, following a public tender issued by Greenland Airports.

VHF ATC radios, VCS and Ricochet Recorder for the three new airports Ilulissat, Nuuk and Qaqortoq

The three systems are for Nuuk International Airport last year and two systems for Greenland's two upcoming airports, Qaqortoq Airport and Ilulissat Airport, both scheduled to open later this year. Jotron has delivered communication systems including radios, recorders and VCS to nine airports since 2019 through direct contracts with Mittarfeqarfiit A/S (Greenland Airports). These installations continue Jotron's long-standing relations with Mittarfeqarfiit, which dates back to 1996.

The current turnkey contract includes complete Jotron communication systems comprising VHF ATC radios, radio control, VCS (RRC-7700), and Ricochet Recorders. This delivery is part of a broader airport modernization program that also encompasses new instrument landing systems and upgraded airfield lighting. The Jotron ATC communication systems are being supplied through COMSA Corporación, a leader in construction and engineering known for delivering innovative, high-tech infrastructure and sustainable solutions.

"The collaboration with Jotron has enabled coordinated progress in the modernization of Greenland's airport infrastructure. The integration of their ATC communication systems contributes to safer and more stable operations," said Ismael García Ledesma, Director of COMSA Industrial.

"This contract builds on our long cooperation with Greenland. With decades of experience in the region, we remain committed to delivering dependable systems that support safe and efficient air traffic operations," said Christian Pindsle, International Sales Director, ATC & Coastal at Jotron.
