

Intersoft Electronics Group established its Korea Branch.

Intersoft Electronics Group is pleased to announce that Intersoft Electronics Services APAC has officially established its Korea Branch in the heart of downtown Seoul, strengthening our long-term strategy of expanding regional support and enhancing our global footprint across the civil and military CNS/ATM domain. This milestone follows the Group's announcement on October 1, 2024 regarding the creation of Intersoft Electronics Services APAC to better serve customers throughout the Asia-Pacific region, where solutions such as the Radar Analysis Support System (RASS®) and the Surveillance Monitoring System (SMS) are widely utilized in Australia, Indonesia, Singapore, Malaysia, Thailand, and India. With the Seoul branch now in place, we are pleased to share that full-scale operations commenced on March 1, enabling us to deliver faster, localized, and more specialized support to our partners and customers in Korea.

Aligned with our commitment to deep local expertise, Intersoft Electronics recently announced the appointment of Brian Ku as Country Head for South Korea. With over 30 years of experience spanning the Republic of Korea Air Force and the Defense Acquisition Program Administration (DAPA), Brian brings an exceptional understanding of the defense and radar systems landscape. He will lead our Korean market expansion with a focus on IFF Mode 5 support, radar performance evaluation, and CNS/ATM solutions powered by platforms such as RASS® and SkyRF®. This leadership appointment further reinforces the strategic role of Korea within our broader APAC growth plan.

Intersoft Electronics Services APAC continues to deliver world-class radar and sensor measurement, evaluation, and engineering services across the region, leveraging advanced technologies including RASS®, SMS, and the SkyRF® drone-based inspection platform to enhance accuracy, safety, and operational efficiency for civil and military aviation stakeholders. The launch of our Seoul branch marks a meaningful step forward as we work even more closely with Korean customers, offering timely support and strengthening collaboration in one of the region's most dynamic aviation and defense markets.

"Korea is one of the most dynamic defense markets in the world, and Intersoft Electronics' advanced radar and CNS/ATM solutions will provide both reliability and innovation to customers in this environment. Through our Korea branch, I am committed to working closely with our partners and delivering world-class technical support in IFF Mode 5 services and radar performance evaluation, contributing to the continued advancement of Korea's defense ecosystem." –

Brian Ku, Country Head South Korea

We look forward to building strong partnerships, delivering exceptional technical services, and contributing to the continued advancement of Korea's IFF Mode 5, CNS/ATM and radar performance ecosystem. Intersoft Electronics Services APAC's Korea Branch is officially open, and we are excited for what lies ahead.
