VISION 2045
STATEMENT

To create global airspace that is safe, fair, intelligent and interoperable, leveraging revolutionised design, technology and services to power global mobility and prosperity.

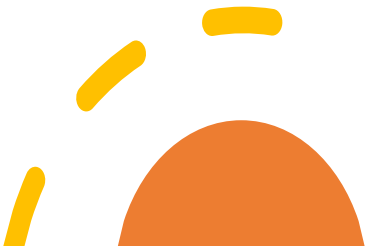

SUCCESS FACTORS

- Full integration, harmonisation and interoperability is possible due to safe, competitive and evolving services that are not restricted to any one aircraft type, nor constrained by traditional geographical boundaries.
 - Service providers enable skies that are safer, cleaner and quieter while still servicing a busier, more diverse airspace and stakeholder base.
 - Dynamic, flexible services are critical to system resilience and scalability.
 - Air Traffic Service Providers (ATSP) - incl. UTM - have carved out new revenue streams and generated value off the back of advancements in technology, digital and data.
 - Personnel have a clear, legitimate role that adds value to the system and its users, versus a forced or inflexible role that threatens safety culture, efficiency and productivity.
