

European aviation welcomes ICAO Assembly agreement on net-zero future

- *Destination 2050 partners voice full support for ICAO Assembly's agreement on **net-zero goal**, aligning sector's objective with the Paris Agreement*
- *Industry reiterates its call for policies which support sector's transition*

Brussels, 07 October 2022 - Today, the five leading European aviation associations¹ which are close partners through the Destination 2050 decarbonisation roadmap, came out in strong support of the outcome of the 41st Triennial International Civil Aviation Organisation (ICAO) Assembly.

The UN body overseeing the global civil air transport sector succeeded in setting **net zero CO₂ emissions by 2050** as the worldwide climate goal for aviation, de facto aligning its climate ambition with the Paris Agreement as well as the global aviation industry's own target and commitment. The Destination 2050 partners stressed the importance of global political support for the net-zero future for aviation, and called on ICAO and its Member States to work on emissions reduction objectives through a global approach with coordinated policies for the entire sector.

Through Destination 2050, the European aviation industry was the first in the world to commit to the realisation of a net-zero goal for all departing flights. Announced in early 2021, the Destination 2050 alliance and commitment included a comprehensive roadmap based on a clear set of measures to reach that goal. The Destination 2050 partners remain fully committed to this roadmap and call for political support for its four pillars including with aircraft and engine technologies, air traffic management and aircraft operations, Sustainable Aviation Fuels and smart economic measures.

Aviation, as a global enterprise, needs climate policies that ensure harmonised approaches for all stakeholders, and to be met by commensurate actions across all regions. In this respect, the Destination 2050 partners praised the long-awaited global agreement at ICAO. They recognised its key role in providing consistency among policies, creating a level playing field, and setting the ground for the necessary regulatory certainty for investment and finance to secure a sustainable future for the air transport sector globally.

About Destination 2050

Europe's aviation sector is collectively on board to lead the way in reducing aviation CO₂ emissions by 2030 and 2050 – making flying more sustainable for the long term. In February 2021, Europe's airlines, airports, civil aeronautics industry and air navigation service providers laid out a joint long-term vision along with concrete solutions to the complex challenge of reaching net zero CO₂ emissions from all flights departing the EU, UK and EFTA by 2050. The independent report by the Royal Netherlands Aerospace Centre (NLR) and SEO Amsterdam Economics shows how a combination of actions from all stakeholders – including the EU and national governments – in four key areas could achieve substantial CO₂ emissions reductions in line with EU climate goals. These include: Improvements in aircraft and engine technologies (including hybrid, electric and hydrogen propulsion), using sustainable aviation fuels (SAFs) both for fixed- and rotary-wing platforms, implementing economic measures and improvements in air traffic management (ATM) and aircraft operations.
