

## **Press release: Jotron completes the acquisition of MEP, expanding its ATC and maritime capabilities**

**With a clear ambition to lead the global market in safe and reliable critical communications in the air, on water and on land, Jotron is delighted to announce the successful completion of its strategic acquisition of Micro Elektronische Producten B.V (MEP)**

Acquiring MEP expands Jotron's portfolio and reinforces its global presence, enabling even greater value for customers worldwide.

Since its founding in 1989, MEP has been developing and supplying Voice Communication Systems (VCS) for critical applications in the Maritime and Aviation sectors.

By combining innovation with convenience, and systems that revolve around optimal human interaction, MEP has become one of the fastest growing companies in this industry, a trusted partner and smart choice that guarantees clear communication for traffic controllers worldwide.

Werner van Eck, CEO of MEP, expressed enthusiasm for the merger, stating: "MEP is excited to join the Jotron group. It will provide us with a faster growth path to reach more customers with our award-winning VCS portfolio. The cultures of Jotron and MEP are very similar, especially in our customer-centric approach and strong focus on quality in everything we do. The combined engineering strengths will lead to even better product propositions for Air Traffic and Maritime Traffic Controllers, helping to make every journey safer."

The integration of MEP's advanced technology and expertise aligns perfectly with Jotron's commitment to providing state-of-the-art communication solutions.

"We are excited about the acquisition of MEP, which complements our existing portfolio and enables Jotron to deliver a more comprehensive suite of products and services, enhancing safety and operational efficiency for ATC & Maritime operators worldwide" said Merete Berdal, Managing Director of Jotron AS. "MEP's reputation for quality and innovation aligns with our values, and we believe that together we can offer the best solutions to our customers. Jotron remains committed to its mission of advancing communication technology in challenging environments, and this acquisition represents a significant step towards achieving that goal".

Following the integration, both companies will collaborate closely to ensure a seamless transition for customers, partners and employees.

Jotron is headquartered in Norway, with offices in the UK, USA, Singapore, and Lithuania. The acquisition of MEP adds a new operations hub in the vibrant and historic city of Amsterdam, the Netherlands, further expanding its global footprint.

**About Jotron:**

Jotron specializes in developing and manufacturing world-leading communication products and systems for land, sea, and air applications worldwide. Jotron's commitment is your safe journey.
